Wynn's® Aircomatic® III & Wynn's® Airco-Clean®

The Problem

Air conditioning systems operate by compressing a refrigerant from a gas into a liquid. This liquid flows through an expansion valve into the evaporator, which allows the liquid to expand back into a gas, cooling rapidly. The blower fan inside the passenger compartment pushes air over the outside of the evaporator, so cold air is circulated inside the car.

Due to the humidity in the air entering the evaporator, moisture droplets condense & adhere to the cooling fins. The darkness combined with moisture, change in temperatures, dust & pollen provide an ideal medium for the exponential growth of micro organisms & bacteria.

Every time the air-conditioning is used, the air that is blown through the evaporator & into the vehicles cabin carries these micro organisms & bacteria which are inhaled by the passengers. This creates an unpleasant smell from the air-conditioning & can make the passengers start coughing & even make them ill.

The Solution

Wynn's® Aircomatic® III & Wynn's® Airco-Clean® have been specifically designed to target the areas inside the air-conditioning system where the micro organisms & bacteria grow & eliminate them. This removes foul smells & bacteria coming from the vehicles air-conditioning system.

The Wynn's® Aircomatic® III utilises ultrasonic technology to transform the Airco-Clean® liquid into a fine mist which is carried by the vehicle's circulation system into the evaporator, eliminating the micro organisms & bacteria at the source.

Wynn's® Aircomatic® III & Wynn's® Airco-Clean® are designed to eliminate micro organisms, bacteria & unpleasant smells that are formed within the vehicles ventilation system & leave a protective film that will last for up to 12 months.

Product #: 30205

Wynn's® Aircomatic® III & Wynn's® Airco-Clean® Ultrasonic for Cars

- Kills mould spores
- Kills bacteria
- Eliminates hay fever related irritations
- Leaves an anti-bacterial film that lasts up to 12 months
- Water based, non-toxic, non-staining, non-flammable
- Leaves a fresh & pleasant fragrance.

Symptoms:

- Foul odour from vents
- Eyes water when A/C in use
- Nose irritated & running when A/C in use
- Passengers feeling ill when A/C in use
- Passengers suffering from hay fever when A/C in use.

Wynn's® Aircomatic® III & Wynn's® Air Purifier

The Problem

Most vehicles spend 99% of their life with the doors closed, so if an unpleasant smell gets into it, it can be very difficult to eliminate & remove the odours. If the source of the smell, i.e. cigarettes, pets, fish, takeaways, spilled drinks, bodily fluids (vomit, sweat etc), rubbish etc are not removed immediately, it quickly becomes harder & harder to remove the resulting odours as they impregnate further into the fabrics & materials inside the vehicle. When the vehicle sits in the sun, the interior is turned into a mini oven & the source of the smell is baked even further into the fabrics & materials.

Opening the windows while driving only exchanges the air & once they are closed, the foul odour returns. Air fresheners are often used to eliminate bad smells but these products only mask the smells & have a limited effect.

Symptoms:

- Cigarette smoke smell
- Foul odours
- Pet fur/hair in the vehicles fabrics
- Wet patches in the vehicles fabrics
- Rubbish inside the vehicle
- Vehicles being closed up & stored for long periods of time.

The Solution

Wynn's® Aircomatic® III with Ozone Treatment & Wynn's® Air Purifier neutralises & removes bad smells.

Ozone is a powerful oxidant. It spontaneously reacts with other substances leading to the breakdown of foul-smelling molecules & removal of the odours. There are three settings for the Ozone pre-treatment 0, 15 or 30 minutes. So the stronger the smell, the longer the Ozone pre-treatment. Once the Ozone has finished then the Wynn's® Aircomatic® III transforms the Wynn's® Air Purifier from a liquid, to a very fine mist via the ultrasonic chamber allowing it to penetrate fabrics & materials. This process is the final stage in neutralising the foul odours by means of a chemical reaction with their molecules.

Product #: 68480

Wynn's® Aircomatic® III with Ozone Treatment & Wynn's® Air Purifier is designed to eliminate unpleasant odours & foul-smelling molecules, not mask them like other treatments.

Product #: 31705

Wynn's® Aircomatic® III with Ozone Treatment & Wynn's® Air Purifier

- Neutralises foul-smelling molecules
- Eliminates unpleasant odours
- Has three levels of treatment to target even the most severe odours
- Leaves the vehicle with a light & pleasant fragrance
- Safe to use
- Water based, non-toxic, non-staining, non-flammable.
