Power Steering Service

**FEEL THE
DIFFERENCE!**

It's time for a change

Whether you're weaving through dense city traffic, or negotiating rough terrain in a 4x4, your Power Steering Fluid is under constant high pressure and a heavy workload. Understandably, it gets tired and distressed.

Over time, contamination of the fluid also seriously compromises the performance of the Power Steering System.

Sources of Contamination:

- Oxidation
- Debris from pump wear & seal abrasion
- Deterioration of rubber hoses
- Varnish deposits
- Extremes of temperature

Ironically, Power Steering Fluid is one of the most neglected areas of vehicle maintenance.

Common problems include:

- Heavy steering
- Noisy operation
- Leaks
- Shudder
- Component failure

OLD FLUID

NEW FLUID

The difference is clear!

**RACK & PINION
STEERING SYSTEM**

Restores your Power Steering

As with all vehicle fluids, changing before deterioration is the solution.

Using the Wynn's Power Steering Flush machine, the rapid removal and replacement of Power Steering Fluid is the most effective way to refresh and rejuvenate your steering performance.

Removing contamination from the system and replacing the old fluid with fresh, clean fluid will:

- Improve steering response
- Extend life of components
- Condition seals & prevent leaks
- Reduce noise, vibration and stiffness
- Noticeably improve steering assistance
